

I'm not robot!

What did we learn?

- Take nothing for granted
 - Metadata is always wrong, every bad thing happens.
- Manual entry and intervention causes problems
 - Automate processes.
 - Remove the need for manual intervention.
 - Make the regular process reflect practice.
- Defining data quality metrics is key
 - Defines and measures the problem.
 - Creates metadata.
- Organization-wide data quality
 - Data steward for the end-to-end process.
 - Data publishing to establish feedback loops.

AUTODESK AUTOCAD 2017

MAC / PC #778-9182815

We install it for you on your MACBook AIR PRO/ LAPTOP

Windows Software for Architect and Interior Designer 2017.

Free consultation any 3D Software for home and business and student LT version.

Beyond compare 3 files at once. Beyond compare use. Beyond compare 3 way merge tutorial.

When we click the Compare to "TCPmaker" menu item on the second directory, Beyond compare comes up showing the two directory trees side by side. You see files on both sides, and some directory icons that you can expand as well. There is a color scheme for file names that conveys information: A file name shown in black is a file that has already been compared to a corresponding file on the other side, and has been found to be identical. A file name shown in blue is a file that has no corresponding file on the other side. A file name shown in red is a file that has the same name as a corresponding file on the other side, but which has a newer date than the file on the other side (and thus may or may not be different). Folder icons use a similar color scheme: A folder colored blue contains at least 1 file that is not present on the other side. A folder colored red contains at least 1 file that is newer than the corresponding file on the other side. Sometimes a folder can be colored partly red and partly blue, to indicate that both of the above conditions are met. You can very quickly copy multiple files from one side to the other by: Selecting one or more files or even one or more whole folders on one side, and then clicking the yellow arrow on the tool bar that points to the other side. This is a very powerful tool for building up a disk image of the software that you will be deploying to your customers. You can very quickly compare two corresponding files by simply double clicking the file on one side or the other. This will compare the two files side by side, as we saw in the previous tutorial, and allow you to quickly copy groups of lines from one side to the other. Let's do that now: we'll double click on the file mtGen.c on the left side (red arrow), open full sized image 32 of 37 You can set the path to bcomp.exe git config --global difftool.bc3.path: c:\Program Files (x86)\Beyond Compare 3\bcomp.exe and configure bc3 as default git config --global difftool.bc3.PDF - Download Git for free Beyond Compare Tips and Tricks Beyond Compare contains a lot of useful features. Here are some that we've found particularly handy. Customizing how differences are displayed Filter how differences are displayed by using the following buttons on the toolbar: - Show the complete contents of both files - Show only the differences between the two files - Show only the parts of the two files that are the same Toggle whether or not some of lines of context should be displayed around differences when the 'Show Diffs' filter is selected by using the this button on the toolbar; Saving a Session Sessions can be saved in Beyond Compare so that you can access them without having to navigate through the VC/m interface to begin the session over. 1. After having begun your session by using the 'Compare' option in VC/m, choose File -> Save from the menu bar in Beyond Compare. A small dialog should open with a folder tree. We would recommend that you create a subfolder called 'VC/m' and save your session with an descriptive name. The screenshot below gives an example. Setting a monospace font It is recommended that you set a monospace font for listing folders in Beyond Compare. This makes it easier to view and find the object versions you want to find in the Beyond Compare interface. 1. From the menu bar in Beyond Compare, choose Tools -> Options 2. In the dialog that opens, select Folder Views -> Display from the navigation tree. 3. Uncheck the 'Use system' checkbox and press the 'Font...' button. 4. Choose a monospace font such as Courier New or Consolas and press OK. Setting rules for ignoring particular differences Some files contain data that is likely to differ between two versions, even if no changes have been made. A good example is the CLS component which contains an export timestamp and a checksum. These will differ between two CLS components, even if their class definitions are identical. Things like this can be distracting when comparing files, so Beyond Compare gives you the option of setting rules to ignore certain differences. 1. Open up a session comparing two components. For this example, we are going to compare a CLS component and its direct descendent. 2. With the two documents side-by-side, choose File -> Session Settings from the menu bar. 3. On the 'Importance' tab, click on the 'Edit Grammar...' button, and on the dialog that opens, click on the first 'New...' button. 4. On the next dialog, select the 'Delimited' category and enter your 'Text from' and 'to'. The screenshot below shows settings that ignore the export timestamp that is generated in a CLS component. 5. Click OK on the dialog, and OK on the dialog underneath. The 'Session Settings' dialog should remain. Here, uncheck the new grammar element you just created (this changes it from Important to Unimportant). 6. Optional: Before clicking OK on the Session Settings dialog, you can save the rule as a default for all new sessions but changing the value of the select box from 'Use for this view only' to 'Also update session defaults' See Also: Concurrent Development: Merging Branches, Comparing Two Object Versions, Configuring Beyond Compare, Scooter Software: Beyond Compare Beyond Compare is focused. Beyond Compare allows you to quickly and easily compare your files and folders. By using simple, powerful commands you can focus on the differences you're interested in and ignore those you're not. You can then merge the changes, synchronize your files, and generate reports for your records. Compare Files, Folders You can compare entire drives and folders at high speed, checking just sizes and modified times. Or, thoroughly verify every file with byte-by-byte comparisons. FTP sites, cloud storage, and zip files are integrated seamlessly, and powerful filters allow you to limit what you see to only what you're interested in. Once you've found specific files you're interested in, Beyond Compare can intelligently pick the best way to compare and display them. Text files can be viewed and edited with syntax highlighting and comparison rules tweaked specifically for documents, source code, and HTML. The text contents of Microsoft Word .doc and Adobe .pdf files can also be compared but not edited. Data files, executables, binary data, and images all have dedicated viewers as well, so you always have a clear view of the changes. Comparing folders Comparing text files 3-way Merge Beyond Compare's merge view allows you to combine changes from two versions of a file or folder into a single output. Its intelligent approach allows you to quickly accept most changes while carefully examining conflicts. Color coding and section highlighting allow you to accept, reject, or combine changes, simply and easily. When merging files you can change any line in the output with the built-in syntax-highlighting editor. By using Beyond Compare's powerful file type support and ability to favor changes from one file, you can trivially accept many changes without even seeing them. You can use Beyond Compare directly from most version control systems, giving you all of the powerful comparing and merging support you need when you need it most. Integrated source control commands are also available, allowing you to check in and check out files without interrupting your work. 3-way folder merge 3-way text merge Synchronize Folders Beyond Compare's intuitive Folder Sync interface lets you reconcile differences in your data automatically. You can efficiently update your laptop, backup your computer, or manage your website, and Beyond Compare will handle all the details. You can copy to and from disks, FTP servers, and zip files, all using the same interface. Anything you don't want affected can be easily filtered out, and all of the powerful comparison techniques are available, making the backup as fast or robust as you need. You can automate repetitive tasks using a flexible scripting language, and any script can be called from the command line, allowing you to schedule your syncs for when it's most convenient. Folder Sync Beyond Compare is published by Scooter Software. Please visit the official site of Beyond Compare where you can install Beyond Compare in about 90 seconds and try it free for 30 days (non-consecutive days actually, so a very long trial period). A tool that

does a lot of different necessary things (photo: Paul Felberbauer at Unsplash.com)What BC does: Folder comparisonsBC can show you two folders side by side, in great detail. And as you click around in those folders it can open up arcane files with strange formats. BC can show you a distant folder on a server somewhere, using SFTP and SSH keys.BC can automatically do your backups.(Andrew Neel, Unsplash.com)What BC does: File comparisonsBC can compare two text files, two code files, two images (what!? yes!), two Word docs, two Excel files, two PDFs. You can look at contracts, expenses, machine code, Javascript files, git repositories...What BC does: roughly 174 thingsThe home screen, reachable anytime by pressing `Ctrl`, gives 11 main tools:is Beyond Compare for everyone?Initially, for me, BC seemed very arcane and when I played with it I couldn't seem to make it do anything by itself, partly because I didn't have good sample data to feed it. It was easy to get BC running but, like installing Photoshop or Autocad for the first time, BC gave me 100s of menus and nothing to use them on -- super frustrating! I knew millions of people were using it (over 1,000,000 licenses sold), I just couldn't figure out how I could use it. BC made me feel a little dumb. I am happy to say I got past that. And it was a little like forcing yourself to use Vim: within a few weeks this utility became indispensable. For code and data, BC is like a microscope, a roll of duct tape, and a shop vac...for starters.Documentation for advanced usersThere are many resources for using BC. Powerusers should check out the following authoritative guides: Documentation for new usersThe topics list to the left is a guide to basic useage, like a missing manual for using Beyond Compare on Excel, jpegs, backups, code review, Git version control, mp3 headers, binary files, Git patches, Windows 10 registry tweeking...Looking at a chili recipeSo what if you opened up a pair of text files in BC?We see there are are some blue differences. These are blue, because they are less urgent differences (e.g. blank lines, or capitalization). Blue differences are unimportant. You can make them disappear completely by clicking this toggle button:There are also red differences, like bacon versus TVP. Notice that red lines have some yellow letters. These call attention to a letter by letter comparison on each line.
